ABS PIPE GLUE
TAPE MEASURE
1 CAN SPRAY ADHESIVE
SANDING BLOCK (80 GRIT)
NEEDLE NOSE PLIERS

LAY OUT ALL PIECES: (INCLUDED)

1 HIDE A RADIO
1 PANEL FINISH COVER

Stop! Your new Hide-A-RADIO was specifically designed to be installed in the RodDoors Underdash Cover. If not already having done so, purchase one from RodDoors today! Many tears have been shed in the attempts of adapting Hide-A-RADIO's to original stock equipment.

Start by clearing a workspace and assembling all tools needed to complete the installation. Dismount any switches, vents, brackets, radios, or anything else that would interfere with the installation of the Hide-A-RADIO.

1. THE FIRST STEP IS MEASURING AND MARKING THE UNDERDASH COVER FOR THE RADIO OPENINGS TO ACCOMMODATE YOUR HIDE-A-RADIO.
2. Once you have determined the location for your particular situation, mark the Underdash Cover using the Hide A Radio bottom plate as a guide, adding 3/16" all around for clearance.

Option#1- Once marked, use the utility knife to scribe the lines and make an X from corner to corner. This will give you four triangular pieces after bending them inward and breaking which will leave a clean opening that should then be sanded smooth for a clean, finished look.

Option#2- Drill hole in one corner of scribed pattern, then with the needle nose pliers, break off in one piece.

3. Test the fit to ensure there are no obstacles in the way. Underdash cover should be fitted as well to accommodate such obstacles as the glove box etc. Any minor adjustments can and should be made at this point.

4. The next step is attaching the Hide A Radio the backside of the Underdash Cover. This can be done using ABS pipe glue (recommended) or double-aided Dualloc Tabs, both of which are available for purchase from RodDoors.

Thank you for choosing RodDoors, Inc.!!!
